

Uniform Measurements  
New Ross District Pipe Band

**Notes**

**Kilt**

**Waist**

Take this firmly, around the actual waist - not on the hip bones where trousers usually sit. The waist measurement for a kilt is usually 1/2" smaller than the waist measurement for trousers, it has to be taken firmly because the kilt sits high on the body and will only stay up if there is a firm enough hold.

**Seat**

Take this measurement firmly but not tightly, and care should be taken that the seat measurement is taken over the widest part of the hips.

**Length**

Take length measurement from 2" ABOVE THE ACTUAL WAIST. The top of the tape should sit just below the rib cage then measure down to the top of the knee cap.

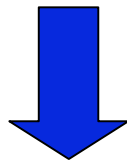

**Children's Kilts**

Waist measurements for children's kilts should be taken in line with the hip bones and not too firm. Seat as above. The length should not include a rise, measure as above but from the actual hip bone.

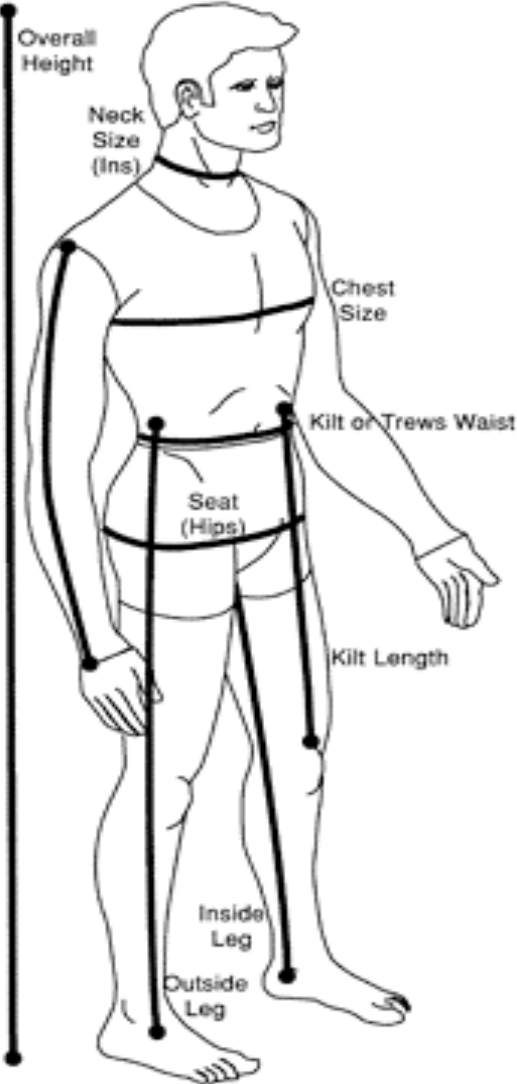

**Jacket**

1. Half width of back
2. Actual chest measurement
3. Overall height
4. Actual waist measurement
5. Length of sleeve -from crown at top of sleeve, straight down to edge of cuff. Arm held straight down
6. Jacket length-from nape of neck to base of spine .
